

**Town of Lauderdale by the Sea**  
**H.A.T. Neighborhood Landscaping Improvement Project (ITB 13-01-02)**  
**Addendum #1**

The Town wishes to issue the following clarifications to all prospective bidders on the H.A.T. Neighborhood Landscaping Improvement Project (ITB 13-01-02). Please be sure to sign and submit this addendum with the bid submittal. All prospective bidders should consider the following clarifications when preparing their bid submittal:

- 1) The contractor will be responsible for restoring any existing irrigation systems impacted by the proposed work. The contractor shall temporarily remove any existing irrigation system within the swale area during grading operations and restore the existing irrigation system back into operations upon the completion of the swale regrading. Any cost associated with the restoration of the existing irrigation systems shall be included within Line Item #11 – Regrade Existing Swale.
- 2) The contractor will be responsible for providing adequate water to any new trees from the day of planting until final acceptance by the Town. The contractor is free to determine the method for providing adequate water to the planted trees. While a water truck would be preferred, it is not required if the contractor has an alternate method.
